

auto-wash

concentrated vehicle shampoo

Product Function

Bilt-Hamber auto-wash is a new technology, high power vehicle shampoo formulated without thickeners, waxes, corrosive salt or other deleterious constituents which could dry to leave stubborn residues or smearing and which also prevent subsequent waxes or finishes adequately adhering.

Bilt-Hamber auto-wash is anti-corrosive on bare steel, ideal for owners of cars or vehicles which may have stone chips or other exposed metal surfaces. The highly concentrated formula means that less is needed to add to your water ensuring that there is less matter to remove from your paintwork prior to polishing and its deliberate high foaming formulation gently lifts particulate matter away from the surface, preventing scratching of delicate paint.

How to Use

Use on cool surfaces. Please note this is a low viscosity clear liquid, it is not thickened, take care when opening container. Dilute product as required; 5ml or 1 teaspoon in a clean bucket then add up to 10litres of fast flowing hot water to generate a thick lather for vehicle paintwork cleaning.

auto-wash can be used neat as a pre-wash spot cleaner using a clean swab for removal of very stubborn oily films. Rinse surfaces thoroughly after use with plenty of clean warm water, dry with chamois leather or micro fibre cloth to finish.

Health and Safety

Keep material away from children. Avoid skin contact with neat liquid, wash from skin or eyes with copious quantities of clean water immediately. Do not ingest.
